

THE DELIVERABLE PART 2:

DIFFERENCE BETWEEN DATES

Deliverable 2 is only required if you have received this assignment more than 4 weeks in advance of your bootcamp's start date. This deliverable is due at the same time as Deliverable1.

Task: Write a C# console application to calculate the duration between two dates in Years, Months and Days. The user should enter two dates as input, then the program will show the result of the difference in time between these two dates. Show the difference in days, hours, and minutes.

To complete this task, you'll need to use what you've learned in addition to some research.

Remember - *Google is your friend* and Slack has access to your bootcamp's teacher and TA!
